

## How to Remove a Broken Light Bulb

Have you ever broken a light bulb while the socket was still screwed into the light socket or lamp? Here's an easy hack to get the job done without hurting yourself!

---

Removing a broken light bulb can be a little tricky and dangerous. There's broken glass to cut you, but even worse there's 120 volts running through it.

Here's what you do:

1. Turn off and unplug the light or lamp.
2. Cut a fresh raw potato in half.
3. Make sure the light or lamp is still unplugged.
4. Take half the potato and screw it over the fixture's socket and the broken bulb clockwise.
5. Unscrew the potato and bulb counter-clockwise.
